

## **Dublin City Council – Flood Defence Unit**

### **South Campshires Flood Protection Project**

Dublin City Council proposes to construct a flood protection scheme along the southern campshires of the River Liffey.

The flood protection will extend from Butt Bridge to a point just east of Samuel Beckett Bridge and returns across Sir John Rogerson's Quay just east of the new pedestrian crossing at Cardiff Lane.

The protection will, for the most part, consist of a new wall which will be approximately 800 to 900mm (3 feet) high, depending on its location, and have a number of openings to allow access to the campshires, pedestrian bridges and walkways. These opening will have flood gates that will be closed off at times of flood risk

The proposal will also incorporate an upgrade of the existing cycle track which is located on the campshires to a new two-way cycle track from Talbot Memorial Bridge to east of Samuel Becket Bridge. This will replace the existing sub standard cyclist / pedestrian conflicts on the campshires and extend the existing cycle facilities to link into the new cycle network at Samuel Becket Bridge.

Dublin City Council wishes to invite local residents to an information meeting in order to outline the proposed project particulars and address any queries that you may have.

### **The information meeting will take place at:**

**Gloucester Street Sports Centre.**

**On the 10<sup>th</sup> of March 2014 at 7.30 PM.**
